```

```
The invention describes an isolated nucleic acid (I) comprising, or which has 80 % sequence identity to, or the full-length coding sequence of, one of 275 nucleotide sequences, and which encodes a corresponding polypeptide selected from 275 amino acid sequences, where all sequences are given in the specification. The polypeptide encoded by (I) is used to detect PRO polypeptides, link a bioactive molecule to a cell expressing a cet propeptide, modulate a biological activity of a cell, stimulate the release of tumour necrosis factor (TNF) -alpha from human blood, modulate the proliferation or differentiation of cells, stimulate or inhibit the printiate the release of proteoglycans, stimulate the release of cytokine of from peripheral blood mononuclear cells, inhibit the binding of A-peptide from peripheral blood mononuclear cells, inhibit the binding of A-peptide or diseases, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, acquired immunodeficiency syndrome caid and polypeptide encoded by it, are useful for treating inflammatory diseases, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, acquired immunodeficiency syndrome and pubbridisation probes, in chromosome and gene mapping, and in generating antisense RNA or DNA. The polypeptides are useful as pharmaceuticals, cribs sequence encodes a novel human secreted and transmembrane PRO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120

The present invention relates to the isolation of novel human PRO polypeptides, and the polynucleotide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are useful for preparing a medicament useful in the treatment of diabetes, bone and/or cartilage disorders (e.g. rheumatoid arthritis, sports injuries, osteoarthritis), obseity, hyper- or hypo-insulinaemia, hearing loss, and coagulation disorders (e.g. stroke, heart attack). Anti-PRO antibodies are useful in diagnostic assays for PRO, by detecting its expression in specific cells, tissues or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated PRO polypeptide useful for treating diabetes, rheumatoid arthritis, sports injuries, obesity, hearing loss in mammals, stroke, heart attack.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Deforge L, Desnoyers L, Filvaroff E, G

The present invention relates to the isolation of novel human PRO polypeptides, and the polynucleotide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are useful for detecting other PRO polypeptides, for linking bioactive molecules to cells expressing PRO polypeptides, for modulating bioactive molecules to cells expressing PRO polypeptides, for modulating contributions of cells expressing PRO polypeptides, and for for identifying agonists or antagonists. The PRO polypeptides are useful for contributing the release of tumour necrosis factor (TMP)-alpha from thuman blood, for stimulating the presence of tumours. The polymelectide chondrocytes, and detecting the presence of tumours. The polymelectide contribution of an incompanient of the proparation of PRO polypeptides are useful as hybridisation probes, in chromosome and gene mapping, in the generation of antisense RNA and Companient of the preparation of PRO polypeptides, for generating transgenic conting the human PRO polypeptides for the secretaring transgenic content of an incompanient of the condaint properties of the invention. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Batent No. 5972677

GENERAL INFORMATION:
APPLICANT: Tischfield, Jay A.
APPLICANT: Seilhamer, Jeffrey J.
TITLE OF INVENTION: Mammalian Phospholipase A2 Nucleotide
TITLE OF INVENTION: Becomed Thereby, Antisense Sequences and Nucleotide
TITLE OF INVENTION: Sequences Having Internal Ribosome Binding Sites
NUMBER OF SEQUENCES: 44
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  127 IGGGAAAAIGCCCAICCICCIACIGGCCCIACGGCIGICACIGCGGACIAGGIGCAAA 186

GENERAL INFORMATION:
APPLICANT: Tischfield, Jay A.
APPLICANT: Seilhamer, Jeffrey J.
TITLE OF INVENTION: Mammalian Phospholipase A2 Nucleotide
TITLE OF INVENTION: Sequences and Low Molecular Weight Amino Acid Sequences
TITLE OF INVENTION: Encoded Thereby, Antisense Sequences and Nucleotide
TITLE OF SEQUENCES: 44
CORRESPONDENCE ADDRESS:

Sequence 29, Application US/09362230

Patent No. 6352849

GENERAL INFORMATION:
APPLICANT: Tischfield, Jay A.
APPLICANT: Seilhamer, Jeffrey J.
TITLE OF INVENTION: Mammalian Phospholipase A2 Nucleotide
TITLE OF INVENTION: Sequences and Low Molecular Weight Amino Acid Sequences
TITLE OF INVENTION: Sequences and Low Molecular Meight Amino Acid Sequences
TITLE OF INVENTION: Sequences Having Internal Ribosome Binding Sites
NUMBER OF SEQUENCES: 44
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 249 IGAAGACCCAGGGGIGCGGCAICTACAAGGACTATTACAGATACAACTITTCCCAGGGGA 308
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     309 ACATCCACTGCTCTGACAAGGGAAGCTGGTGTGAGCAGCTGTGTGCTGCTGTGACAAGG 368

Sequence 21, Application US/09362230
Ratent No. 6152849
GENERAL INFORMATION:
APPLICANT: Tischfield, Jay A.
APPLICANT: Tischfield, Jay A.
APPLICANT: Seilhamer, Jeffrey J.
TITLE OF INVENTION: Mammalian Phospholipase A2 Nuclectide
TITLE OF INVENTION: Sequences and Low Molecular Weight Amino Acid Sequences
TITLE OF INVENTION: Sequences Having Internal Ribosome Binding Sites
NUMBER OF SEQUENCES: 44
CORRESPONDENCE ADDRESS:

Human phospholipase genes and proteins useful to diagnose, prevent or treat cancer, autoimmune or inflammatory or reproductive disorders. Claim 9; Page 74-75; 80pp; English.

The present sequence is the coding sequence of human phospholipase 2 (HPPL2). The protein produced from this sequence is involved in the hydrolysis of membrane phospholipids. The protein and its coding sequence can be used to diagnose and treat the following: cancers such as

1080 1440 1020 1200 1200 1260 1320 1320 1380 1440 1500 1560 1560 1620 1620 CTCGGGAGTGCCACACTTCTCCGACCCCACTGCCCGGAGCCCCTGC 1680 1740 1740 1860 1860 GCCAGGCAGTGCAGCGGAGGCGCAGCGCAGGCCCCACTGATGGCCGGG 1920 AAGCTCTCAGAICAACGGGGGGCCCTGAGTCAIGGCCAGAACCCTCTGCC 900 SCCTCAACACCAAAGGGCAGACCTGACCACTTTTGAATTTGGGGAGTG 960 AAGGTATCTGGAGCAACTGTATGCAGCCAACCTCCAGGACAGCTTATA AGCCCAGCCAGTTCTGGGACCGCTGGGTCAGGAACCAGGCCAACCTGGA TCCCCCTTCTGAAGATAGAAGAACCCCCTCAACAGCCGGCAGAATAGC CCGATCTTCTGACGTGGCGTCCACTGGCCCAGGCCACACATAATTTCCT ATGGGCTCCCCAACCAGCTGACACCTCGGAGCCCCACCTGTGCCTGCTGCTGCTGCTGCTGCTGCTGCTGCTCCCCACCTCGGACCCCCACCTGTGCCTGCT CCGAGTTCTTTATGGGGCAGCTGATGAAGAGGCTTCCTGAGTCCCGCAT ACCTCATCAATACCAGCTGCCTGCCCTCCTGCAGCCCACTCGGGACGT GCCAGGAGCAGGGATCCCGTTCCCACCCATCTCGCCCAGCCCCGAAGA ATTICCACAAAGACTACTTICAGCATCCTCACTTCTCCACATGGAAAGC TITCCTCTGGGGGTCCGGCGGACACCCGAGGAGGGGGCAGCTGGGGAGGT TGCTGCACCTGACACATTACAATGTCTGCAACAACCAGGAGCAGCTGCT TTTCCTCTGGGGTCCGGCGGACACCCGAGGAGGCGGCGGCAGCTGGGGAGGT PATCGGACTCTCCCTACCACTACACGAGGTGACCTACAGCCAGGAGGA

(also

phospholipase A2. This sequence encodes the human PLA2 protein known as phosphatide 2-acyl hydrolase)

This invention describes a novel human phospholipase A2 (PLA2) protein (I) and its encoding nucleic acid. The amino acid (I) releases arachidonic acid in specific tissues characterized by unique membrane phospholipids, by generating lysophospholipid species which are deleterious to membrane integrity or by remodeling of unsaturated species of membrane phospholipids through deacylation/reacylation mechanisms. The amino acid is useful in assays to identify inhibitors having a therapeutic benefit, such as inhibiting the central role of PLA2 in the inflammatory component of Alzheimer's disease. The amino acid (I) allows sensitive and rapid screening and identification of inhibitors of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes a novel human phospholipase A2 (PLA2) protein (I) and its encoding nucleic acid. The amino acid (I) releases arachidonic acid in specific tissues characterized by unique membrane phospholipids, by generating lysophospholipid species which are of membrane integrity or by remodeling of unsaturated species of membrane phospholipids through deacylation/reacylation mechanisms. The amino acid is useful in assays to identify inhibitors having a therapeutic benefit, such as inhibiting the central role of PLA2 in the inflammatory component of Alzheimer's disease. The amino acid (I) allows sensitive and rapid screening and identification of inhibitors of phospholipase A2: This sequence encodes the human PLA2 protein (also

{	Novel nucleic aci screening assays phospholipase A2	d molecules encoding phospholipase A2 enzyme, useful in for identifying compounds that inhibit or block enzyme activity.
PS X	Claim 1; Col 47-54;	32pp; English.
8888		The present invention describes an isolated polymucleotide (I), Accomprising a 3085 base pair phospholipase A2 (PLA2) sequence (given in AAF74999), encoding a 913 residue phospholipase A2 protein sequence

(given in AAB74635), or a nucleotide sequence which hybridises un stringent conditions to the above mentioned nucleotide sequence.

2169 ACTTGATACATCACAGACTCATACAAAAAAAAAAAA 2204 2109 2986 2866 2386 2446 1662 2506 2566 1809 2686 1869 2746 1929 2806 1989 2049 1422 1482 2326 1542 1602 1694 1749 2206 2266 2626 1182 2086 1302 2146 1362 1122 1966 1242 qq d qq d ò g Š g à g à Ωp δ g à Dp à g ò g ð ð ò d 음 ò ð g g Qγ δ g P 24 ò ð described are: (1) an isolated polymucleotide (II) comprising an 8517 base pair sequence, given in AAF74998; (2) an expression vector (III) comprising (I) and an expression control sequence; (3) a host cell transformed with (III); (4) an expression vector (IV) comprising (II) operably linked to an expression control sequence; and (5) a host cell transformed with (IV). (I) is useful for screening compounds which inhibit or block cytosolic FLA2 (oFLA2) enzyme activity. The host cells transformed or transformed or transfected with cFLA2 enzymes in large quantities which are useful in screening assays for discovering agents that inhibit PLA2. The inhibitors identified are useful for treating inflammatory conditions such as rheumatoid arthritis, psoriasis, or asthma. (I) is also useful in the detection of mutant genomic DNA which has been digested with restriction enzymes and run on an electrophoretic gel by hybridising to the genomic DNA 1485 1545 1605 1665 1725 1785 1001 1845 1061 1905 1121 1965 1245 1365 1425 1305 941 821 881 401 461 521 581 641 701 761 geaccircarccccrcraagcrcrrraacrccaagrrcrrraraagacagcraargaaga GGCTTCCTGAGTCCCGCATCTGCTTCTTAGAAGGTATCTGGAGCAACCTGTATGCAGCCA GCCTTCCTGAGTCCCGCATCTGCTTCTTAGAAGGTATCTGGAGCAACCTGTATGCAGCCA CTTTTGAATTTGGGGGGGGGGGGGGGTCCCCTACGAGGTCGGCTTCCCCAAGTACG CTITICALITICACIONE CONTROLLA CONTROLL GGGCCTTCATCCCCTCTGAGCTCTTTGGCTCCGAGTTCTTTATGGGGCAGCTGATGAAGA CAATGACTTCCCTGTATGGGCAGCTGGCTGGCTGAAGGAGCTGGGCCTCTTGGATTGCG CAGAGTGGTCTCAGAAGACCTGGCAGGCCCACTGAGTTGCTGAAGACCCAGGTGACA 1606 AGCGTGCCCGCTTGGGCTACCCAAGCTGCTTCACCAACCTGTGGGCCCTCATCAACGAGG CGCTGCTGCATGATGAGCCCCATGATCACAAGCTCTCAGATCAACGGGAGGCCCTGAGTC CGCTGCTGCATGAGCCCCATGATCACAAGCTCTCAGATCAACAGGGCCCTGAGCTC ATGGCCAGAACCCTCTGCCCATCTACTGTGCCCTCAACACCAAAGGGCAGAGCCTGACCA ATGGCCAGAAACCCTCTGCCCATCTACTGTGCCCTCAACACCCAAAGGGCAGAGGCTGACCA GACTGAGGGAGCTGGCCGTGCGACTGGGCCTTCGGGCCCTGTGCAGAGGAGCAGGCCTTCC 1186 GACTGAGGGAGCTGGCCGTGCGCTTCGGGCCCTGTGCAGAGGAGCAGGCCTTCC ACCTGCAGGAGGATGAGATCCCAGTGGTAGCTATTATGGCCACTGGTGGTGGATCCGGG ACCTGCAGGAGGATGAGATCCCAGTGGTAGCTATTATGGCCACTGGTGGGGATCCGGG CAATGACTTCCCTGTATGGGCAGCTGGCTGGCCTGAAGGAGCTGGGCCTCTTGGATTGCG TCTCCTACATCACCGGGGCCTCGGGCTCCACCTGGGCCTTGGCCAACCTTTATGAGGACC rerectacarcacegesecressericaceressecrissectacerateaecace CAGAGTGGTCTCAGAAGGACCTGGCAGGCCCCACTGAGTTGCTGAAGACCCAGGTGACCA AGAACAAGCTGGGTGTGCTGGCCCCCAGCTGCAGCGGTACCGGCAGGAGCTGGCCG AGCGTGCCCGCTTGGGCTACCCAAGCTGCTTCACCAACCTGTGGGCCCTCATCAACGAGG Gaps Length 3085; 33; A - 959 C; 907 G; 612 T; 0 U; 0 Other; Indels 4; 2; DB Score 1816.8; Pred. useful in Novel nucleic acid molecules encoding phospholipase A2 enzyme, us screening assays for identifying compounds that inhibit or block phospholipase A2 enzyme activity.

Strifler

Sharp JD,

Disclosure; Col 57-62; 32pp; English.

The present invention describes an isolated polynucleotide (I),

Comprising a 3085 base pair phospholipase A2 (PLA2) sequence (given in

AAFA499), encoding a 913 residue phospholipase A2 protein sequence

Given in AAB74635), or a nucleotide sequence which hybridises under

Stringent conditions to the above mentioned nucleotide sequence. Also

described are: (I) an isolated polynucleotide (II) comprising an B317

Comprising (I) and an expression control sequence; (3) a host cell

comprising (I) and an expression control sequence; (IV) comprising (II)

Comprising (I) and expression control sequence; and (5) a host cell

cransformed with (IV). (I) is useful for screening compounds which

cransformed with (IV). (I) is useful for screening compounds which

cransformed with (IV). (I) is useful for screening compounds which

cransformed or transformed or transfected with cPLA2 enzymes in large

transformed or transformed or transfected with cPLA2 enzymes in large

cransformed or transformed or transfected with cPLA2 enzymes in large

The present sequence is that of human mRNA encoding a novel phospholipase A2 (PLA2, also referred to bPLA2 or PLA2-beta). PLA2 liberates arachidonic acid from phospholipids, leading to the production of eloosanoids involved in inflammatory reaction. A claimed assay for evaluating the effectiveness of a compound as an inhibitor of phospholipase A2 (PLA2) involves culturing a cell transformed with an expression vector comprising PLA2 genomic DNA or CDNA, isolating the PLA2 contacting it with a candidate compound, and determining whether the PLA2 activity has been inhibited. The assay provides rapid and efficient screening for new antiniflammatory drugs that inhibit the efficient screening for new antiniflammatory drugs that inhibit the arachidonic acid cascade. These may be especially useful in the treatment of the inflammatory component of Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            822 CGCTGCTGCATGATGAGCCCCATGATCACAAGCTCTCAGATCAACGGGAGGCCCTGAGTC 881

2986 ACCCAAAACCCCCCGGCCCGGGCCGGUUUUCCCUUCUGCGCUACCUUGAGUAGUUGGAGC 3045 The present sequence is that of human cDNA encoding a novel phospholipase A2 (PLA2, also referred to bPLA2 or PLA2-beta). PLA2 liberates are chidonic acid from phospholipids, leading to the production of elosanoids involved in inflammatory reaction. A claimed assay for evaluating the effectiveness of a compound as an inhibitor of phospholipase A2 (PLA2) involves culturing a cell transformed with an expression vector comprising PLA2 genomic DNA or cDNA, isolating the Assays to evaluate the effectiveness of inhibitors of phospholipase A2, used to screen candidate compounds, comprise recombinant expression of novel phospholipase A2. Phospholipase A2; PLA2; bPLA2; PLA2-beta; inhibitor; screening; antiinflammatory; human; Alzheimer's disease; therapy; ss. Sharp JD, Strifler BA; 2204

                                                                                                                                                                                                                                                                      461
                                                                                                                                                                                                                                                                                                                                 521
                PLA2, contacting it with a candidate compound, and determining whether the PLA2 activity has been inhibited. The assay provides rapid and efficient screening for new antiinflammatory drugs that inhibit the arachidonic acid cascade. These may be especially useful in the treatment of the inflammatory component of Alzheimer's disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CAACAGCCGGCAGAATAGCTGAGTTTTTCACCGATCTTCTGACGTGGCGTCCACTGGCCC

                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to a novel calcium-independent cytosolic phospholipase A2 (cPLA2)-beta enzyme and the CDNA sequence encoding it. The CDNA clone is isolated from U937 cells. The CPLA2 enzyme is active in membrane phospholipid turnover and in regulation of intracellular signalling mediated by the arachidonic acid cascade. The invention describes a method for producing phospholipase enzymes which can be used to identify inhibitors of their function. The inhibitors can used to identify inhibitors of their function. The inhibitors can used to treat inflammatory disorders such as rheumatoid arthritis, psoriasis, asthma, and inflammatory bowel disease. The present sequence represents a chimeric CDNA sequence which encodes for CPLA2 N-terminal peptide-CPLA2-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ı,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          941
                                                                                                                                                  The invention relates to a purified phospholipase enzyme (calciumindependent cytosolic phospholipase A_2-beta enzyme) peptide appearing as ABG76482 encoded by a polymuclectide appearing as ABG764883. The protein has an enzymatic activity in a mixed micelle assay (MMA) with 1-palmitoylassaying chemical agents for antiinflammatory activity mediated by the various components of the arachidonic acid cascade. cPLA2-beta is also useful in the development of polyclonal and monoclonal antibodies which are useful as research or diagnostic tools, and to study phospholipase A_2 activity and inflammatory conditions. The present sequence encodes

The present sequence represents a partial cDNA sequence which encodes for human cPLA2-beta enzyme
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          401
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a novel calcium-independent cytosolic phospholipase A2 (cPLA2)-beta enzyme and the cDNA sequence encoding it. The cDNA clone is isolated from U937 cells. The CPLA2 enzyme is active in membrane phospholipid turnover and in regulation of intracellular signalling mediated by the arachidonic acid cascade. The invention describes a method for producing phospholipase enzymes which can be used to identify inhibitors of their function. The inhibitors can used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Calcium-independent cytosolic phospholipase A2-beta; cPLA2-beta; U937 cell; membrane phospholipid turnover; intracellular signalling; arachidonic acid cascade; inflammatory disorder; rheumatoid arthritis; psoriasis; asthma; inflammatory bowel disease; antiinflammatory; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           342 GACTGAGGGAGCTGGCGTGCGACTGGGCTTCGGGCCCTGTGCAGAGGAGCAGGCCTTCC

```
The invention relates to a purified phospholipase enzyme (calcium-independent cytosolic phospholipase A_2-beta enzyme) peptide appearing as ABG76482 encoded by a polynuclectide appearing as ABK118893. The protein has an enzymatic activity in a mixed micelle assay (MMA) with 1-palmitoyl 2-(~1~4C)-arachidonyl- phosphatidylcholine. CPLA2-beta is useful for vasaying chemical agents for antiinflammatory activity mediated by the various components of the arachidonic acid cascade. CPLA2-beta is also useful in the development of polyclonal and monoclonal antibodies which are useful as research or diagnostic tools, and to study phospholipase A_2 activity and inflammatory conditions. The present sequence encodes a
                                                                                                                                                                                                                                                                Novel purified calcium-independent cytosolic phospholipase A2-beta enzyme, useful for screening compounds having antiinflammatory activity mediated by the arachidonic acid cascade.
   "No start codon shown"
                                                                                                                                                                                                                                                                                                                           Claim 1; Col 11-14; 19pp; English.
